Figure 1: A detailed phylogenetic tree showing the relationships between 28 individuals from 14 families. The tree is rooted at the top and branches downwards. Each individual is represented by a name and a family name in parentheses. The tree is color-coded: red lines indicate the primary lineage, while grey lines indicate secondary or tertiary lineages. Numerical values (e.g., 15-5, 15-7, 15-8, 15-9, 15-10, 15-11, 15-12, 15-13, 15-14, 15-15, 15-16, 15-17, 15-18, 15-19, 15-20, 15-21, 15-22, 15-23, 15-24, 15-25, 15-26, 15-27, 15-28) are placed along the branches, likely representing genetic distance or time. The tree shows a complex pattern of inheritance, with some individuals having multiple parents or siblings, and others having no direct lineage shown. The tree is organized into two main groups, each with its own set of individuals and families.
